

# The AI Workforce Platform

From single-player AI assistants to a multi-player AI workforce,  
managed from anywhere.

Tromsø, September 2025

# The Paradigm Shift

Software development is having its "Google Docs" moment. The era of isolated, single-player AI tools is over.

## Today: AI-Assisted

### Human-Driven

Developer must be at their desk.

### AI Assists

Tools like Copilot provide autocomplete.

### Sequential & Slow

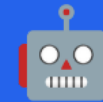

Work is bottlenecked by one person's availability.

## With CoVibes: AI Workforce

### Human-Directed

PM spawns agents from their phone.

### AI Acts

Agents autonomously fix bugs and build features.

### Parallel & Fast

Multiple tasks are completed simultaneously.

# Multi-Agent Collaboration in Action

This isn't a concept. It's a functional platform. See how our AI agents work together in a shared workspace, directed by a human team.

# Key Platform Features

How CoVibes enables true parallel development

## Parallel Work

Multiple AI agents work simultaneously on different parts of your codebase. While Agent A refactors the frontend, Agent B updates the backend API, and Agent C writes tests - all in parallel, not sequential.

## Real-Time Visibility

See exactly what each agent is doing in real-time. Live terminal output, code changes, test results, and progress updates are visible to the entire team through a unified dashboard.

## Human-in-the-Loop

Maintain control and quality through strategic oversight. Review agent work, provide guidance, merge changes, and make deployment decisions while the AI handles the execution.

**The Result:** What used to take a development team weeks of sequential work can now be completed in days through parallel AI execution, with humans focusing on architecture decisions and quality oversight.

# Creating a New Category

We sit at the intersection of three massive trends: AI adoption, remote work, and the need for always-on development cycles.

**\$26B+**

**Developer Tools Market** <sup>1</sup> Gartner 2024

Growing at 25% year-over-year.

**100M+**

**Developers Worldwide** <sup>2</sup> GitHub Octoverse 2024

70% of whom work in a remote or hybrid model.

**92%**

**Of Developers Use AI** <sup>3</sup> Stack Overflow Survey 2024

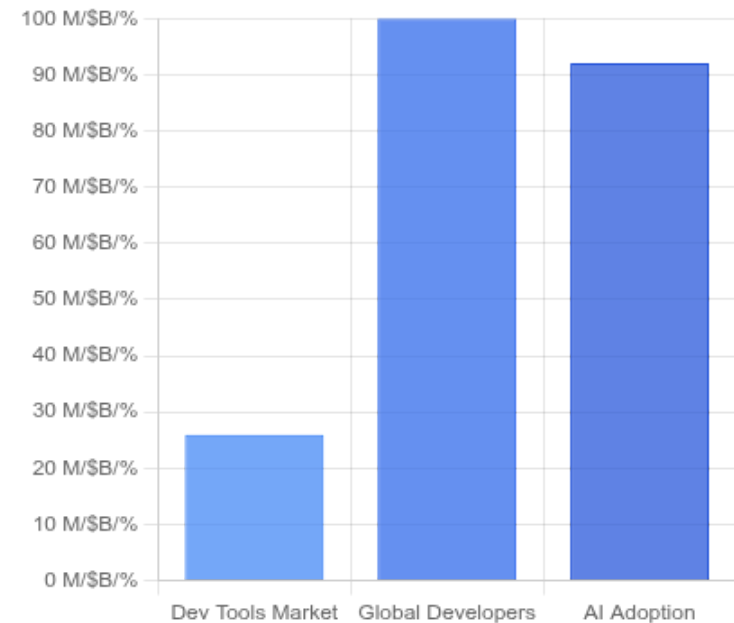

But almost all are using isolated, single-player tools.

**3x Growth**

**In AI Startup Formation** <sup>4</sup> PitchBook 2024

2024 saw record venture funding in AI-first companies.

**Market Size & Potential**

The dramatic reduction in development friction through AI is catalyzing an unprecedented wave of startup formation. Teams that once needed 10 engineers can now build with 2-3 people directing AI agents. CoVibes is the collaboration platform enabling this new generation of lean, AI-powered startups.

# AI Workforce-as-a-Service (WaaS)

From free starter to enterprise scale - choose the plan that fits your team.

FREE

## Founders

Perfect for getting started.

## Free

Always

- ✓ Bring your own VM
- ✓ Bring your own AI keys
- ✓ Up to 2 team members
- ✓ Community support

## Startup

For growing teams.

## \$49

/ month

- ✓ Bring your own VM
- ✓ Managed AI agents included
- ✓ Up to 10 team members
- ✓ Priority support

POPULAR

## Scale

For scaling businesses.

## \$199

/ month

- ✓ Managed VM infrastructure
- ✓ Unlimited AI agents
- ✓ Unlimited team members
- ✓ 24/7 dedicated support

## Enterprise

For large-scale needs.

## Custom

Contact us for pricing

- ✓ Private cloud deployment
- ✓ Custom integrations
- ✓ SLA guarantees
- ✓ White-glove onboarding

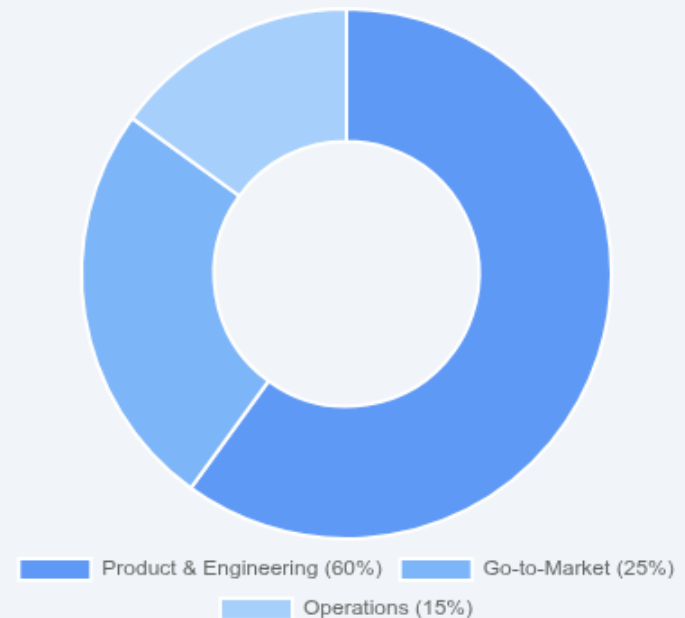

# Building the Future of Development

Our vision is to enable AI development teams that work while you sleep, with humans providing high-level orchestration.

## Our Roadmap

- **Now**  
Any team member can spawn AI agents with full workspace access.
- **12 Months**  
Agents begin to collaborate with each other on complex tasks.
- **24 Months+**  
Fully autonomous AI teams managed by human orchestration from mobile devices.

## Funding & Use of Funds

We are raising funding to hire key engineering and marketing roles in Tromsø, Norway to achieve our 12-month milestones.

# The Team

Building the future of AI-powered development from Tromsø, Norway

**Eivind Meyer**

**Machine Learning Developer**

Leading the technical development of CoVibes' AI workforce platform, bringing expertise in machine learning and distributed systems.
